--BRIEF DESCRIPTION OF THE DRAWING--

Page ⁷~~8~~, ^{after the first full paragraph}~~before the first full paragraph~~, insert:

--DETAILED DESCRIPTION OF THE INVENTION--.

Page 9, second full paragraph:

--The link 25 can possibly be held with some play in its upper joint 32 on the roof part 7 or in its lower joint 33 on the automobile body, since, unlike a guide rod for the pivoting movement of the roof 2, it does not have to have a guiding function but rather only a supporting function in the aforementioned dead-center position. Accordingly, for example, the upper joint 32 for the link 25 on the roof part 7 can be moved in a slotted link SL. Likewise, elastic play can also be present in the link 25 itself.--

Page ¹³ 14, first full paragraph:

--The distance between the front and rear extreme positions of the drive mechanism 22 24 is limited to a few centimeters by a possibly adjustable rear stop in such a way that in the rear extreme position of the roof 2, the pins 18 are pulled out of the windshield frame 8 just far enough to allow swiveling to occur. Displacement too far to the rear, on the other hand, would unnecessarily delay the opening or closing operation.--
